LECTURE

AI in the creative industries and media

08

| What AI added, changed, and broke — and where to say "no".

Lecture 08 · 75 min · 39 slides

CENTRAL QUESTION OF THE LECTURE

**What has AI done to the creative industry
by 2026 —
and where should an engineer reasonably
say
"AI is not needed here"?**

Two-part by design — both parts matter equally.

Lecture map — 6 sections + Q&A

6 sections · 75 min · 1 checklist to take away

0

**Opening
+ keystone axis**

3-tenses axis
+ 3 families

1

AI ADDED

new
capabilities

2

AI CHANGED

cost · speed
· professions

3

AI BROKE

12 failure
cases

4

AI NOT NEEDED

4 criteria
for refusal

5

What to do

5-question
checklist

+ Q&A

AI added → changed → broke

Three tenses of one process — each generation of creative tools passes through them in months.

1

ADDED

New capabilities — things that technologically did not exist before.

Sora 2 · 25 sec text-to-video · sync audio. Midjourney Omni Reference. ElevenLabs — voice clone from 1 min.

2

CHANGED

Cost · speed · professions — the new economics of the creative industries.

Cost collapse of 100×–10,000× across asset types. Concept art: days → seconds. Upwork +70% year over year in AI/ML.

3

BROKE

A new class of failures and legal debt.

RIAA v. Suno, Sony's millions. Arup CFO deepfake \$25.6M. SI — fake authors. NYT v. OpenAI — 20M logs.

This is an axis of three tenses of one process, not three parallel categories.

3 families of generative media models

Mental model: each family → its own fundamental limitations, independent of implementation quality.

1. Diffusion

PRINCIPLE

noise → reversal → image

TOOLS 2026

Stable Diffusion · Midjourney · Flux · DALL-E ·
Imagen · Adobe Firefly

ENGINEERING CONSEQUENCE

"Commercial safety" depends on the training corpus, not on the architecture.

2. Latent video transformers

PRINCIPLE

latent space + temporal consistency

TOOLS 2026

Sora 2 · Veo 3.1 · Runway · Kling 3.0

ENGINEERING CONSEQUENCE

Sora's 25-sec limit — cost grows linearly + temporal drift after ~25 sec.

3. Neural audio synthesis

PRINCIPLE

autoregressive + diffusion

TOOLS 2026

Suno · Udio · ElevenLabs · Stable Audio

ENGINEERING CONSEQUENCE

Voice clone from 1 min — fine-tuning a pretrained foundation model, not from scratch.

SECTION

AI ADDED

New capabilities: text-to-video · character preservation across generations · voice cloning · world models.

0

Opening
+ keystone axis

1

AI ADDED

2

AI CHANGED

3

AI BROKE

4

AI NOT NEEDED

5

What to do

Text-to-video 2026 — production quality

3 flagship models define the state of the industry

Sora 2

OpenAI

25 sec · 1080p · sync
audio

\$0.10/sec 720p · cameos

openai.com/index/sora-2/

Veo 3.1

8 sec · 720p/1080p ·
native audio

\$0.05/sec Lite

Google AI Ultra

Kling 3.0

Kuaishou

15 sec · 4K · 60 fps

ELO #1 (1243)

Feb 5, 2026 · 60M creators

OPENAI SORA · LAUNCH DEMO · YOUTUBE

openai.com/index/sora-2/ · \$0.10/sec

LESSON FOR THE ENGINEER

Mini-failure: 25 sec is not a film. A cinematic pipeline is assembled from short blocks under human direction (Lionsgate × Runway = augmentation, not replacement).

Character preservation: cameos and Omni Reference

Multi-scene narrative became possible. Without it, AI video does not work for storytelling.

Sora 2 cameos

OpenAI + Disney partnership worth \$1B+

A character is registered — called by name in prompts across multiple scenes.

Midjourney Omni Reference (v7)

Image-to-image accuracy 60% → 85%+

A character reference image preserves face/clothing/pose proportions.

Runway Gen-4 Director Mode

Scripting across scenes via structured objects

Character + locations + motion patterns as constants across all scenes.

MIDJOURNEY · CHARACTER REFERENCE · "knight in a forest" × "old man"

LESSON FOR THE ENGINEER

Drift between scenes appears after 5-10 scenes. Continuity supervisor — a new profession in the creative pipeline.

Voice cloning + dubbing into multiple languages

ElevenLabs: voice clone from 1 min of audio → 32+ languages. Production use in the corporate sector.

ELEVENLABS · OFFICIAL · elevenlabs.io

● Voice 1 · Multilingual · expressive

● Voice 2 · Russian · neutral

● Voice 3 · EN-UK · narrator

● Voice 4 · ScarJo-like soundalike

COST COLLAPSE: dubbing per language

\$50-500 → **<\$1** /min

Long-form: weeks → minutes (Dubbing Studio, 29 languages)

PRODUCTION USE

Deutsche Telekom

Klarna

Multi-language

LESSON FOR THE ENGINEER

MINI-FAILURE: ScarJo v. OpenAI "Sky" (May 2024). OpenAI pulled the voice within a week — formally without a lawsuit. A de-facto win for the right of publicity: a voice clone requires explicit consent, even if it is technologically "merely similar".

World models — Genie 3 (DeepMind)

Text → playable 3D world @ 24 fps. This is NOT video generation — it is a simulated environment.

GENIE 3 · DEEPMIND · OFFICIAL DEMO

deepmind.google/blog/genie-3-a-new-frontier-for-world-models

CHARACTERISTICS

text → playable 3D world

24 fps · real time

720p · several minutes

LESSON FOR THE ENGINEER

This is not a video generator — it is a simulated environment. Production use: so far edge cases (game prototypes, location scouting). The frontier is still ahead.

Russian context: local convenience vs the frontier

Russian GenAI is functional for the end user + mass-market premium; but not at the frontier in video and music. Structurally (capex/data), not ideologically.

SHEDEVNUM + KANDINSKY · OFFICIAL INTERFACES

Source: *appleinsider.ru* comparison of ShedeVRUM vs Kandinsky · 2023

Images

Kandinsky 6.0 (MoE, free via GigaChat)

competitive

Video

Kandinsky 5.0 (Apache 2.0)
Lags behind Sora/Veo/Kling

structural gap

Audio

SymFormer · SaluteSpeech
Yandex SpeechKit

below ElevenLabs

Legal landscape

Mintsifry (Russian Ministry of Digital
Development) 03/18/2026
TDM* · content labeling · 09/01/2027

in progress

* TDM = Text & Data Mining (research exception in law)

LESSON FOR THE ENGINEER

Local convenience (free · RU prompts · no VPN · rubles · legal perimeter) $\neq$ frontier-level in video and music. The concentration of R&D in the US/China is structural (GPU capex, video datasets), not ideological.

Personalization at scale + production use in Hollywood

Adobe Firefly: \$400M direct revenue 2024-25. Lionsgate × Runway — augmentation, not replacement.

ADOBE FIREFLY · ENTERPRISE CLIENTS

Deloitte

Tapestry

Paramount+

Pepsi

dentsu

Stagwell

LIONSGATE × RUNWAY · SEP 18, 2024

"...saving millions and millions of dollars on pre-production and post-production"

— Michael Burns, Vice Chairman of Lionsgate

Source: investors.lionsgate.com · quarterly earnings call, Nov 2024

METRICS 2026

22B+

assets in <2 years

\$400M

direct revenue 2024-25

40%

of video ads — AI-generated (IAB 2026)

LESSON FOR THE ENGINEER

MINI-FAILURE: 86% of buyers use AI, but adoption ≠ success. Toys R Us Cannes 2024 — sentiment swing -10 pp.

2

SECTION

AI CHANGED

Cost collapse 100×-10,000× · speed days → seconds · new vs lost roles.

0

Opening
+ keystone axis

1

AI ADDED

2

AI CHANGED

3

AI BROKE

4

AI NOT NEEDED

5

What to do

Cost collapse: 100x–10,000x across asset types

The marginal cost of generation is 2-4 orders of magnitude cheaper. But the commercially-safe enterprise segment is separate.

ASSET	BEFORE	AFTER	×
1 image	\$50-200 freelance \$25-100 stock photo	\$0-0.25	200x-10,000x
50 product images	\$1-25K photoshoot	\$0-1.50	>1,000x
1 min of 720p video	\$1-50K shoot+post-production	~\$6 Sora 2	150x-8,000x
Dubbing \$/min/language	\$50-500 actor+studio	<\$1 ElevenLabs	50x-500x

MID SEGMENT ≠ FREE

\$400M

Adobe Firefly
direct revenue fiscal year 2024-25

licensed corpus + process + integration = enterprise SaaS stack

The lower segment is washed out, the mid segment grows.

Source: ZSky AI, Sora 2 API Pricing, ElevenLabs pricing.

Speed: days → seconds

The iteration cycle becomes 10-100× tighter → new human skills.

LESSON FOR THE ENGINEER

Engineering lesson: the iteration cycle is 10-100× tighter → new human skills — deciding "good enough / not good enough" faster, because more new options appear.

New professions: prompt engineer · AI director · AI-workflow specialist

A specialized class between the AI tool and the final product (client deliverable).

UPWORK · AI/ML CATEGORY

Search: AI / ML / prompt engineering

Prompt engineer · Midjourney expert · \$35-65/hr

AI director / supervisor · \$50-90/hr

AI-workflow specialist · enterprise · \$60-120/hr

Continuity supervisor · video · \$40-75/hr

Upwork +70% year over year · 52% of services volume — AI

4 NEW ROLES

Prompt engineer / AI artist

Shapes prompts + post-processing → a production-ready result

\$25-80/hr

AI director / AI music producer

Supervises model output: iterations + post-processing + multimodality

Analogous to an art director

AI-workflow specialist

Integrator of AI tools into studios' production processes

Adobe Firefly Foundry deployments

Continuity supervisor

Checks character/scene continuity across multi-frame sequences

Controls drift between scenes

LESSON FOR THE ENGINEER

New roles sit between the AI tool and the final product for the client. They grow fast, but are smaller than the displaced class.

Displacement: -17% graphic design · Shutterstock isolated values

Wage decline from the bottom is structural, not temporary. Industry consolidation as the response.

UPWORK · GRAPHIC DESIGN · YEAR OVER YEAR

-17%

of graphic-design jobs

40% of copywriter jobs \$10-19/hr — detected as AI · <10%
at \$60+/hr · wage decline from the bottom

SHUTTERSTOCK · LICENSING FOR AI

2023 **\$104M**

2024 **\$138M**

2027 **\$250M**

pivot: photos → training data for AI

INDUSTRY RESPONSE

Getty + Shutterstock merger

\$3.7B · Jan 2025 · Defensive consolidation

SAG-AFTRA + WGA*

Digital-replica clause · 2026 · 4-year extension

Voice actors · worldwide

Commodity dubbing displaced · ElevenLabs in the corporate sector

* SAG-AFTRA = Screen Actors Guild · WGA = Writers Guild of America

LESSON FOR THE ENGINEER

Structurally: AI washes out the lower segment and leaves the top segment protected. The clauses do not cover bottom-tier freelance.

3

SECTION

AI BROKE

12 cases: copyright × 4 + deepfakes × 2 + slop · fake authors · backlash · displacement + taxonomy.

0

Opening
+ keystone axis

1

AI ADDED

2

AI CHANGED

3

AI BROKE

4

AI NOT NEEDED

5

What to do

"AI and copyright" — 4 different categories of lawsuit

Not one legal question, but four. With different legal logic and outcomes.

1. Scraping for training

INPUT SIDE

An AI company assembled a corpus WITHOUT a license

→ *NYT v. OpenAI · Andersen*

2. Output similarity

OUTPUT SIDE

The model reproduces protected content verbatim

→ *verbatim quotation of NYT · DMCA*

3. Style imitation

"IN THE STYLE OF A SPECIFIC ARTIST"

Class action by artists · style is not copyrightable, but DMCA + rights of publicity

→ *Andersen v. Stability/MJ/Deviant*

4. Voice/likeness

RIGHT OF PUBLICITY

Use of a voice/likeness without consent

→ *ScarJo v. OpenAI · SAG-AFTRA · Korea*

LESSON FOR THE ENGINEER

"AI copyright" is NOT one question, but 4 different categories of risk.

Check which of the 4 applies to your process.

Each of the 4 categories is examined next through a separate reference case.

NYT v. OpenAI — training + output similarity (Case 1)

NYT v. OpenAI (Dec 2023): the court ordered OpenAI to produce 20M ChatGPT logs. Summary judgment (SJ) deadline — Apr 2, 2026. Verbatim-quotation theory.*

THE NEW YORK TIMES · DEC 27, 2023

TIMELINE

Dec 2023

NYT filed suit

2024-25

Discovery + fight over procedural motions

Apr 2, 2026

Summary judgment (SJ) deadline

20,000,000 · ChatGPT logs under discovery

* SJ = summary judgment (a ruling without a full trial)

LESSON FOR THE ENGINEER

If the model can quote your training corpus verbatim — that is NOT "fair use", it is evidence of infringement. Checking output similarity against the training data is mandatory.

Getty v. Stability — a UK win vs a US wait (Case 2)

UK High Court 11/04/2025 — Stability won the main claims (weights ≠ a copy under CDPA*). The US case — motion to dismiss** 02/10/2026.

THE VERGE · GETTY vs STABILITY · FEB 2023

TIMELINE

Nov 4, 2025

UK · Stability won the main claims

Feb 10, 2026

US case · motion to dismiss expected

Pending

Trademark + passing-off — separate claims

UK: STABILITY WON the main claims under CDPA

* CDPA = UK Copyright, Designs and Patents Act 1988 · ** MTD = motion to dismiss

LESSON FOR THE ENGINEER

Jurisdictions diverge — what is legal in the UK under CDPA is **ILLEGAL** in the US under "fair use". For a global deployment, check both.

Andersen v. Stability/MJ/Deviant — style imitation (Case 3)

Class action by artists. The motion to dismiss was denied in Aug 2024 → discovery. Third amended complaint — Feb 27, 2026. Trial — Sep 8, 2026.*

KELLY McKERNAN (PLAINTIFF) · WIKIMEDIA COMMONS

TIMELINE

Jan 2023

Class action filed (10 artists)

Aug 2024

motion to dismiss denied (Judge Orrick) → discovery

Feb 27, 2026

3rd amended complaint

TRIAL DATE · SEP 8, 2026

*MTD = motion to dismiss

LESSON FOR THE ENGINEER

Style imitation "in the style of [a specific artist]" is UNSAFE, even if style is not copyrightable. Class actions survive the motion to dismiss on DMCA + rights of publicity.

RIAA v. Suno/Udio — licensing under litigation pressure (Case 4)

RIAA filed suit 06/24/2024. UMG settled with Udio 10/29/2025; Warner settled with Suno Sep 2025. Sony is actively litigating against both.

BILLBOARD · MAJOR LABEL LAWSUIT · JUN 24, 2024

TIMELINE

Jun 24, 2024

RIAA files suit against Suno + Udio

Oct 29, 2025

UMG × Udio settlement → joint platform

Sep 2025

Warner × Suno settlement (royalties + stake)

Jul 2026

Suno SJ — Sony actively litigating against both

3 MAJOR LABELS × 2 DEFENDANTS — status

UMG × Udio: settled

UMG × Suno: negotiating

Warner × Suno: settled

* UMG = Universal Music Group (one of the 3 "Big Three" major labels)

Warner × Udio: litigating

Sony × Suno: litigating

Sony × Udio: litigating

LESSON FOR THE ENGINEER

Licensing under litigation pressure — the actual outcome: 4 of 6 plaintiff-defendant combinations are settled or in negotiation. This is a new layer of the business model, not a "ban on all AI music".

Thomson Reuters v. Ross — the first US denial of "fair use" (Case 5)

Feb 2025, Judge Bibas: 2200/3000 headnotes — infringement, "fair use" rejected. Caveat: Ross is a non-generative AI.

DAVIS WRIGHT TREMAINE · ROSS RULING · FEB 2025

TIMELINE

Feb 2025

Bibas · the first US denial of "fair use"

2200/3000

headnotes — infringement

Pending

Test cases for LLM/diffusion still ahead

"FAIR USE" 4-FACTOR TEST (Warhol v. Goldsmith)

1 · purpose

2 · nature

3 · amount

4 · market

Caveat: Ross — non-generative AI (legal search). Generative LLM/diffusion test cases are still ahead.

LESSON FOR THE ENGINEER

"Fair use" is NOT the default. Test cases for LLM/diffusion are still ahead. Do NOT build a product roadmap on the assumption that "fair use" will work as a defense.

Arup CFO deepfake — a \$25.6M fraud (Case 6)

Hong Kong, Jan 2024 · A finance worker on a video call with a deepfake CFO + colleagues → 15 transactions.

CNN · \$25M FRAUD IN HONG KONG · MAY 16, 2024

Arup · British engineering firm · Sydney Opera House

ATTACK SCENARIO

LESSON FOR THE ENGINEER

A video call ≠ identity verification in 2024+. Financial transactions require verification through an independent channel — a callback to a known number, multi-factor authentication, a documented process.

The schoolgirl deepfake crisis in Korea (Case 7)

Aug 2024 · >200 Telegram chats from selfies of classmates/teachers · 4× vs 2023.

PBS NEWSHOUR · PROTEST IN KOREA · 2024

CRISIS FIGURES

>200

Telegram chats with deepfake porn

6,500

takedown requests, Jan-Jul 2024 (4× vs 2023)

74%

of suspects — 10-19 years old

793 / 16

reports / criminal cases (2021 — Jul 2024)

LESSON FOR THE ENGINEER

An accessible capability + weak enforcement = mass collective harm. For consumer AI tools, a safety layer (NSFW-content detection + age verification + complaint-handling process) is mandatory BEFORE launch.

Slop + model collapse · Google AI Overviews (Case 8)

"Put glue on pizza" + "eat one rock per day". Shumailov, Nature 2024: recursive training → degradation.

GOOGLE AI OVERVIEW · real answers (May 2024)

"how to keep cheese from sliding off pizza"

→ AI Overview: "add $\frac{1}{8}$ cup of non-toxic glue to the sauce"

source: a Reddit joke (11 years old)

"how many rocks should I eat per day?"

→ AI Overview: "at least one small rock per day"

source: The Onion (satire)

NATURE · vol 631 · p 755-759 (2024)

Shumailov et al. — "AI models collapse when trained on recursively generated data"

AI Autophagy Disorder

LESSON FOR THE ENGINEER

Source quality matters more than volume.

A model trained on unfiltered Reddit jokes loses to a model trained on a curated dataset — even if the curated one is 10× smaller.

This explains why Adobe Firefly works: a licensed corpus, not data scraped from the web.

Sports Illustrated fake authors + Amazon fake books (Case 9)

SI, Nov 2023 · articles with AI-generated profile photos. Authors Guild: a surge of fake books on Amazon Kindle under AI pseudonyms.

CNN · SPORTS ILLUSTRATED FAKE AUTHORS · NOV 27, 2023

"Drew Ortiz" — entirely fictional · AI portrait + AI text

AMAZON KINDLE 2023-24 · AUTHORS GUILD

AI PSEUDONYMS

a surge of fake books (Authors Guild 2023-24)

AI-generated knockoffs pass themselves off as real jazz figures, financial advisors

"Frank Gioia" · "Ted Alkyer" — fakes of real jazz personalities

Amazon imposed a limit of 3 books/day + AI disclosure

LESSON FOR THE ENGINEER

Accumulated trust is a key brand asset. AI pseudonyms destroy it instantly. If you publish under a name — the name must be a real person OR the AI authorship must be explicitly disclosed.

Marketing failure — Toys R Us + Coca-Cola (Case 10)

Toys R Us Cannes Lions 2024 — sentiment swing -10 pp. Coca-Cola Holidays 2024 AI ad — viral negativity.

TOYS R US STUDIOS · SORA AD · CANNES 2024

TOYS R US · SENTIMENT SWING (June 2024)

POSITIVE

+12.2% → +3.4%

-8.8 pp positive · +39.9 pp negative

NEGATIVE

13.5% → 53.4%

COCA-COLA · «HOLIDAYS ARE COMING» AI · 2024

COCA-COLA AI AD · NEGATIVE (Nov 2024)

"soulless" · "creepy faces" · "the truck wheels spin the wrong way"

100 employees · 70,000 AI clips · viral mockery

LESSON FOR THE ENGINEER

AI advertising is possible, but a flagship seasonal campaign WITHOUT human leadership = brand damage. Sentiment swing, NOT CTR, is the primary metric of brand-trust risk.

Displacement: the consolidated picture — a structural shift (Case 11)

Wage decline from the bottom is structural, not a temporary shock. The clauses help the top segment, not the bottom.

+ Getty + Shutterstock merger \$3.7B (Jan 2025) — defensive consolidation

LESSON FOR THE ENGINEER

Displacement is structural, not a temporary shock. The clauses help, but wage decline from the bottom remains. Understand which class of workers your AI project will displace BEFORE launch.

4

SECTION

AI not needed here

Criteria for negative selection · 3 human-only zones · empirical rejection by end users.

0

Opening
+ keystone axis

1

AI ADDED

2

AI CHANGED

3

AI BROKE

4

AI NOT NEEDED

5

What to do

4 criteria for refusing AI in a creative project

The lessons learned from Section 3 → translated into a checklist.

1. License on training data

No documented licensed corpus → legal debt under category 1.

→ *Andersen v. Stability · RIAA v. Suno*

Firefly = yes · Stable Diffusion = risks

2. Output-similarity check

Outputs may reproduce protected content → liability under category 2.

→ *NYT verbatim-quotation theory*

A technical control is mandatory

3. Consent for voice/likeness

No explicit consent → risk of the ScarJo + SAG-AFTRA + Korea class.

→ *ScarJo v. OpenAI · the Korea crisis*

Recognizable real people — always consent

4. Brand-trust risk

A flagship/historical campaign without human leadership → measurable backlash.

→ *Coca-Cola · Toys R Us · SI*

Sentiment swing, not CTR

3 zones where AI should not replace the human

"AI as a tool" works; "AI as replacement" does not.

Investigative journalism

NYT/WaPo guidelines prohibit AI for primary reporting

- Source verification — human-only
- On-the-record interviews — human-only
- Accountability journalism — human responsibility is non-delegable

Original creative direction

Flagship brand campaigns without human leadership = brand damage

- Toys R Us Cannes 2024 — sentiment swing -10 pp
- Coca-Cola Christmas 2024 — a cool reception
- SI by-line — an investigative scandal

Coherent long-form narrative

50-min album · multi-act script — human for now

- Character-continuity drift after 5-10 scenes
- Plot coherence across 90+ minutes — no
- Voice coherence across a whole album — no

Here — AI only as a supporting tool under human supervision; never as a replacement layer.

AI thumbnails on YouTube · 47.3% of creators opted out

Empirical rejection by end users · Social Blade Creator Survey · Dec 2025

#1

47.3%

*of creators opted out of
AI thumbnails*

#2

−22% / −19%

*CTR drop:
creepy skin / text failure on mobile*

#3

−61.8%

*drop-off in the first 15 sec
promise-content mismatch*

LESSON FOR THE ENGINEER

End users notice and punish AI corner-cutting. Brand-trust risk is not theoretical — measurable CTR + drop-off + retention. If a product relies on AI visuals for end users, measure not only the cost of generation — measure CTR, retention, brand attitude.

5

SECTION

What the engineer should do

Action checklist · 5-question · the lecture's main takeaway.

0

Opening
+ keystone axis

1

AI ADDED

2

AI CHANGED

3

AI BROKE

4

AI NOT NEEDED

5

What to do

5-question checklist before AI in a creative project

Apply it BEFORE the start, not after. If even one "no/risk" — reconsider the approach.

1.

Is the tool's training data licensed?

Firefly = yes (Adobe Stock + licensed content) · SD/Midjourney = Andersen-class risks

2.

Output-similarity check against protected content?

NYT verbatim-quotation risk · a technical control is mandatory

3.

Consent for voice/likeness — if applicable?

ScarJo · SAG-AFTRA Digital Replicas · Korea — always consent for real people

4.

IP-clean tools for commercial use?

End-to-end pipeline: licensed corpus + similarity check + disclosure

5.

Brand-trust risk for flagship/historical campaigns?

Coca-Cola · Toys R Us · SI — measurable spend of brand capital

IF "NO/RISK" — 3 OPTIONS

A.

Don't use AI

A non-AI alternative

B.

Mitigate structurally

*Licensing + similarity check + consent
infrastructure + brand accounting*

C.

Accept the risk explicitly

*A documented business decision + calibrated
mitigation. NOT implicitly.*

Q &

A ?

CENTRAL QUESTION — A REMINDER

What has AI done to the creative industry by 2026 — and where to say "no"?

BACKUP QUESTIONS

- Where are the limits of "fair use" in AI training?
- Sora vs Lionsgate — where is Hollywood in 2030?
- The Mintsifry bill — what changes for RU engineers?
